

## **Madrigal Pharmaceuticals Presents Preclinical Results Supporting the Therapeutic Potential of its Lead $\beta$ -Selective Thyroid Hormone Receptor Agonist, MGL-3196, at AASLD Liver Meeting**

October 23, 2017

**Results Demonstrate that MGL-3196 Provides Metabolic, Anti-inflammatory and Anti-fibrotic Benefits in a Long-term, High Fat Diet, Mouse NASH Model**

CONSHOHOCKEN, Pa., Oct. 23, 2017 (GLOBE NEWSWIRE) -- Madrigal Pharmaceuticals, Inc. (Nasdaq:MDGL) today presented preclinical results for MGL-3196 in a poster session at The Liver Meeting<sup>®</sup> 2017, American Association for the Study of Liver Diseases (AASLD) being held at the Walter E. Washington Convention Center in Washington, DC, October 20 – 24, 2017.

MGL-3196 is a first-in-class, oral, once-daily, liver-directed, thyroid hormone receptor (THR)  $\beta$ -selective agonist medication that is in Phase 2 development as a treatment for non-alcoholic steatohepatitis (NASH) and heterozygous familial hypercholesterolemia (HeFH). Top-line results from the Phase 2 studies for NASH and HeFH are expected by year-end and in the first quarter of 2018, respectively.

Key findings from the long-term high fat diet (HFD) mouse NASH model include:

- confirmation that prolonged treatment of mice with HFD generates fatty liver disease with a liver gene array profile consistent with activation of NASH inflammation and fibrosis pathways
- findings that MGL-3196 potentially normalizes hepatic function in HFD animals, including restoration of normal hepatic metabolic regulation, liver size and histology without impacting tissues outside the liver
- apparent reversal and prevention of the progression of lipid, inflammatory and fibrotic markers of NASH at human equivalent exposures of MGL-3196

**Poster # 1969: MGL-3196, a  $\beta$ -Selective Thyroid Hormone Receptor (THR) Agonist, Demonstrates Metabolic, Anti-inflammatory and Anti-fibrotic Benefits in a Long-term High Fat Diet (HFD) Mouse NASH Model**

### **About Madrigal Pharmaceuticals**

Madrigal Pharmaceuticals, Inc. (Nasdaq:MGDL) is a clinical-stage biopharmaceutical company pursuing novel therapeutics that target a specific thyroid hormone receptor pathway in the liver, which is a key regulatory mechanism common to a spectrum of cardio-metabolic and fatty liver diseases with high unmet medical need. The Company's lead candidate, MGL-3196, is a first-in-class, orally administered, small-molecule, liver-directed, thyroid hormone receptor (THR)  $\beta$ -selective agonist that is currently in Phase 2 development for NASH and heterozygous familial hypercholesterolemia (HeFH). For more information, visit [www.madrigalpharma.com](http://www.madrigalpharma.com).

### **Forward-Looking Statements**

*This communication contains "forward-looking statements" made pursuant to the safe harbor provisions of the Private Securities Litigation Reform Act of 1995.
